

CAR LIFTS - SINGLE POST

Instantly Double Your Parking Space

Adding Garage Living's 5,000 lbs Single Post Full Platform Parking Lift to your garage lets you keep your prized vehicles at home and instantly doubles your parking capacity without the cost of a major renovation or off-site storage. Perfect for showcasing a summer car or fitting two vehicles into one bay, this residential-grade lift installs in just one day and features a fully enclosed runway plus a side-column design for unobstructed access when lowered.

Will A Car Lift Fit In My Garage?

Every garage is different and there are 4 factors that will determine if a car lift will fit: vehicle heights, ceiling height, garage door track setup and garage door operator. If you can park your vehicle in the garage then you have enough floor space for a car lift. The last thing is the garage door. You may need a high lift conversion for your door so it opens at a higher level within your garage. The minimum height required for a lift installation is 10'6"-13' or more depending on the type of vehicle being stored. In most cases, we can tell you over the phone if you can fit a car lift in your garage.

SPECIFICATIONS

SINGLE POST PLATFORM CAR LIFT - 9000SPL5K

Capacity	5,000 LBS	Lifting Height (Clearance under Platform)	78" (6' 6")
Overall Length	184" (15' 4")	Lifting Time	60 seconds
